ROTEL®

CHASSIS LAYOUT

1. VR202, Volume Control
2. S8, Muting Switch
3. S7, Loudness Switch
4. S6, Mode Switch
5. S5, Tone Defeat Switch
6. VR205, Treble Control (R-ch.)
7. VR203, Treble Control (L-ch.)
8. VR206, Bass Control (R-ch.)
9. VR204, Bass Control (L-ch.)
10. S3, Hi-Fil. Switch
11. S1, Power Switch
12. S2, Low Fil. Switch
13. C002, Ripple Filter Capacitor
14. C001, Ripple Filter Capacitor
15. Main Amp. & Power Supply pcb
16. Q701, Stabilizer Transistor
17. T001, Power Transformer
18. J002, 003, 004, AC Outlet
19. Line Voltage Selector
20. Q307, Power Amp. Transistor (L-ch.)
21. D701, Rectifier
22. D702, Rectifier
23. Q306, Power Amp. Transistor (L-ch.)
24. Tape Monitor Jacks
25. Q314, Power Amp. Transistor (R-ch.)
26. VR301, Idling Current Adj. (L-ch.)
27. Input Jacks
28. Q313, Power Amp. Transistor (R-ch.)
29. VR302, Idling Current Adj. (R-ch.)
30. Equalizer Amp. Circuit Board
31. Tone Control Amp. Circuit Board

32. S4, Speakers Switch
33. S9, Monitor Switch
34. S10, Selector Switch
35. VR201, Balance Control
36. GND. Terminal
37. PRE/MAIN Jacks (R-ch.)
38. PRE/MAIN Jacks (L-ch.)
39. Speakers-1 Terminals (R-ch.)
40. Speakers-1 Terminals (L-ch.)
41. Speakers-2 Terminals (R-ch.)
42. Speakers-2 Terminals (L-ch.)
43. F003, Speaker Fuse (R-ch.)
44. F002, Speaker Fuse (L-ch.)
45. F001, AC Fuse

PRECAUTIONS

1. Always disconnect the chassis from power line when soldering. Turning the power switch OFF is not enough. Power line leakage passing through the heating element may destroy the transistors.

2. Never attempt to do any work on the transistor amplifiers without first disconnecting the AC line cord and waiting until the power supply filter capacitors have discharged.

3. Replacement for output and driver transistors, if necessary, must be made from the same beta group as the original type.

4. If one output transistor burns out (open or short) always remove all output transistors in that channel and check the bias
- adjustment, the control and other parts in the network with an ohm-meter before inserting a new transistor. All transistors in one channel will be destroyed if the base biasing circuit is open on the emitter end.

5. When mounting a replacement power transistor, be sure the bottom of the flange, the mica insulators and the surface of the heat sink are free of foreign matter, for they may cause transistors failure.

6. Silicon grease must be applied between the transistor and the mica insulator, and between the mica insulator and the heat sink for better heat conduction.

BIAS (IDLING CURRENT) ADJUSTMENT

Set Speakers switch to OFF position.
Set Volume Control to minimum position.
Connect the plus lead of a DC milli-volt meter to test point T1 (on main amp. pcb) and the minus lead to test point T2 (for Left

channel, connect the plus lead to test point T3 and the minus lead to T4), and rotate the potentiometer VR302 (for Left channel, VR301) to obtain a 7.5mV reading on the DC milli-volt meter (see Figure 1).

TROUBLE SHOOTING

- I. Completely Inoperative.

A. If the pilot lamp does not light, check to see if the AC Fuse, F001, is OK.

1. And if the AC Fuse is OK,

a. Power Switch connection may be faulty, or

b. Power Transformer may be faulty, or

c. AC Fuse connection may be faulty.

2. And if the AC Fuse is blown,

a. Rectifier, D701, 702, 703 or 704, may be faulty, or

b. Transistor, Q701, may be shorted out, or

c. Power Transformer (Sec. winding) may be shorted out.

B. If the pilot lamp does light, check to see if the speaker fuse is OK.

1. And if the speaker fuse is OK, check to see if there is a signal at PRE OUT jack.

a. And if there is a signal at PRE OUT jack,

1) Transistor, Q301, 302, 303, 304, 305, 306 or 307 (Q308, 309, 310, 311, 312, 313 or 314 for Right channel) may be faulty, or

2) Capacitor, C301 (C308 for Right channel) may be faulty.

b. And if there is no signal,

1) Capacitor, C203, 204, 208, 209, 214 or 218 (C221, 222, 226, 227, 232 or 236 for Right channel) may be faulty, or

2) Transistor, Q201, 202, 203 or 204 (Q205, 206, 207 or 208 for Right channel) may be faulty.

2. If the speaker fuse is blown,

a. The speaker circuit (including speaker system) may be shorted out.

II. Only Phono section inoperative.

1. Capacitor, C401, 405 or 408 (C409, 414 or 417 for Right channel) may be faulty, or

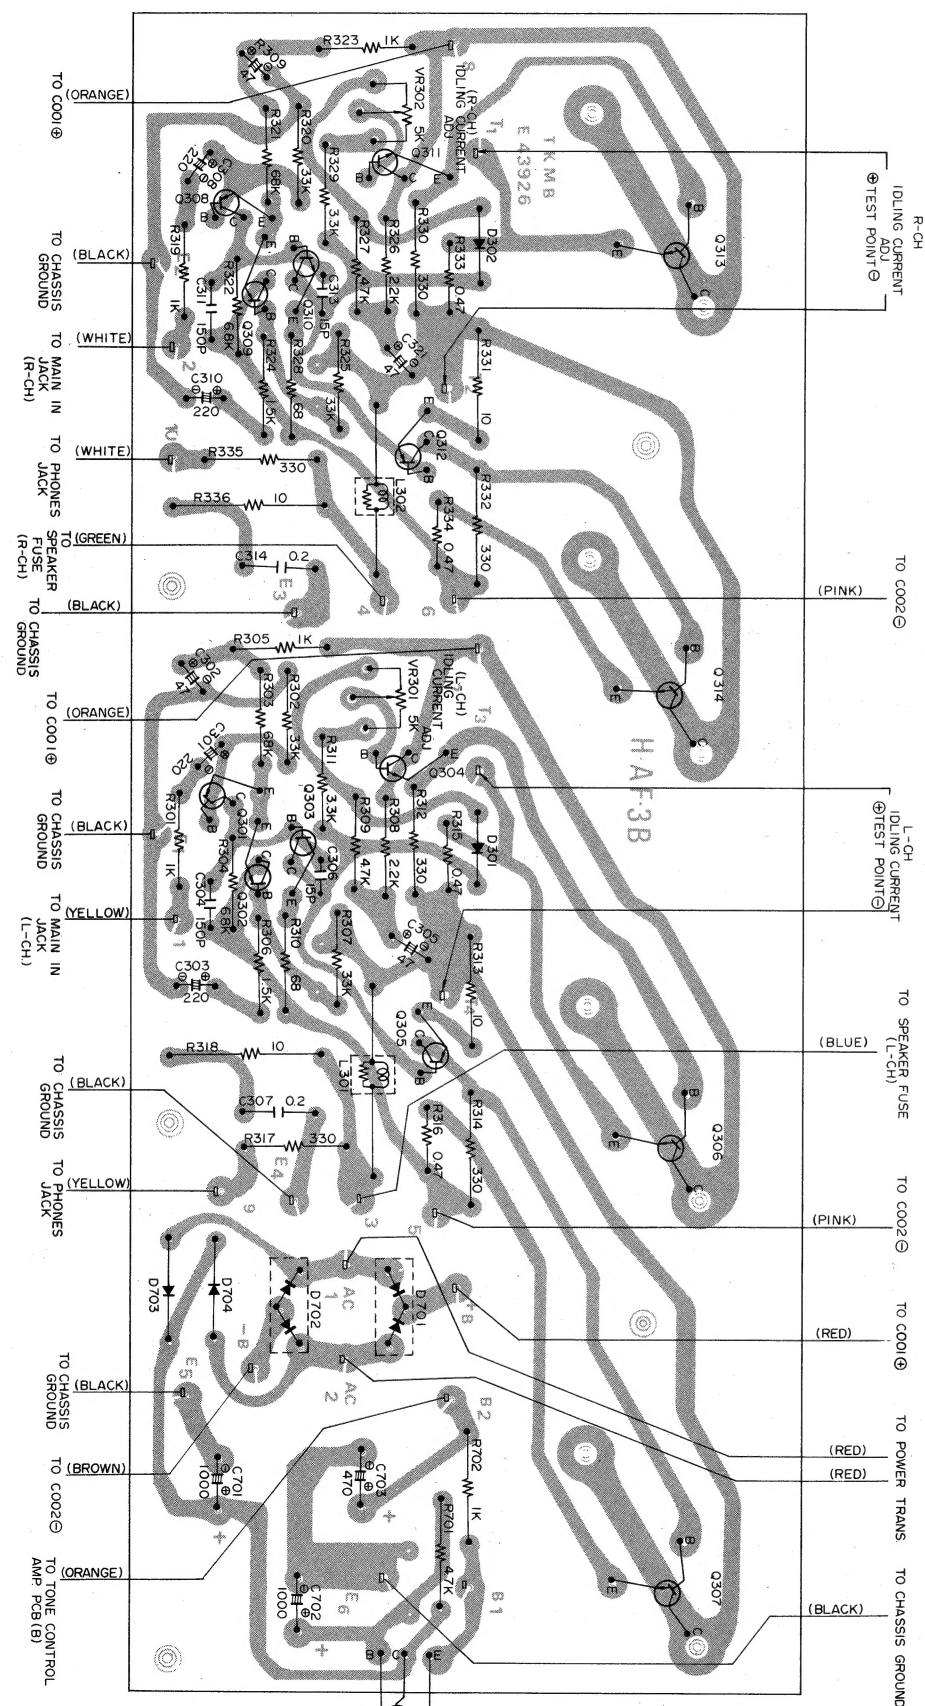

2. Transistor, Q401 or 402 (Q403 or 404 for Right channel) may be faulty.

GAIN DIAGRAM

The diagram illustrates the signal path and gain levels in the audio system. It starts with two inputs: PHONO-1 (2.5mV) and PHONO-2 (2.5mV). These feed into an EQUALIZER AMP. with a gain of 36 dB. The output of the equalizer goes to a junction where TAPE MONITOR-1 (240mV, -3dB) and TUNER (165mV), AUX-1 (165mV), and AUX-2 (165mV) are connected. The signal then enters the TONE CONTROL AMP. which has a gain of 21.5 dB and a -8 dB attenuation point. The output of the tone control amp. is 13.5 dB and feeds into the MAIN AMP. with a gain of 26.5 dB. The output of the main amp. is 800mV and is connected to a LOAD (8-ohm) which is powered by a 17V source.

PARTS LIST

CHASSIS PARTS

Schematic Location	Part No.	Description
RESISTORS		
R001, 004, R007, 010	552015322	Carbon Film, 15K ±5%, 1/4W
R002, 005, R008, 011	552010422	Carbon Film, 100K ±5%, 1/4W
R003, 006, R009, 012	552010222	Carbon Film, 1K ±5%, 1/4W
R013, 016	552033422	Carbon Film, 330K ±5%, 1/4W
R014, 015	552012422	Carbon Film, 120K ±5%, 1/4W
R017, 018	551068233	Composition, 6.8K ±10%, 1/2W
VR201	581005033	Variable, 250KW, Balance Control
VR203, 204, VR205, 206	581005036	Variable, 50KB, Bass & Treble Control
CAPACITOR		
C001, 002	400470439	Electrolytic, 4700mfd, 35V
TRANSISTORS		
Q306, 307, Q313, 314	301901126	ED260, Power Amp.
Q701	301201125	2SC1061, Stabilizer

Schematic Location	Part No.	Description
MISCELLANEOUS		
T001	205001347	Power Transformer (100, 117, 220, 240V)
S1, 2, 3, (1 set)	614030808	Switch, Push 3-keys, Hi-Fil., Low Fil., Power
S4	601011225	Switch, Speakers Selector
S9	601011227	Switch, Monitor
S10	601011239	Switch, Input Selector
J001	626110023	Headphones Jack
J002, 003, J004	648211126	AC Outlet
PL1	351080015	Lamp, 8V, 0.15A, Pilot
F001	341220030	Fuse, 3A—3AG, AC
	341220015	Fuse, 1.5A—3AG, AC (for 220V or 240V area)
F002, 003	341220030	Fuse, 3A—3AG, Speaker Protector
	624100210	Pin Jack, 10P
	624100208	Pin Jack, 8P
	624100104	Pin Jack, 4P
	642400104	Speakers Terminal, 4P
	625001112	Din Jack, 5P, Tape Monitor
	648211127	Bracket, Fuse

EQUALIZER AMP. CIRCUIT BOARD
